### *Our Expertise*

Choosing the right system for your environment should be a task left to experts, as installing the wrong system can be a very bad investment. Between us, we have 60 years of experience recommending and installing the correct flooring for a variety of manufacturing, engineering and warehouse facilities across the UK. Following a thorough assessment of your floors (Area Site Evaluation), I will recommend the best system for you and take care of your whole project from concept to creation.

### *Our Promise*

Our floors are always delivered as promised. We will guide you through the whole process and give you realistic deadlines that we'll stick to. Not just that, we will walk the floor with you every twelve months after installation to ensure your investment is maintained as it should be and you are fully satisfied.

**WE ARE WITH YOU  
EVERY STEP OF THE WAY.**

Maintaining your floors is not just an aesthetic requirement. According to HSE, oily floors and slipping on dust are the key reasons for slips and falls at manufacturing plants. On average, they cause over a third of all major injuries in the workplace. It's your responsibility as an employer to ensure that floors at your facility are suitable, in good condition and even when subjected to frequent contamination, people can walk on them without the risk of slipping.

## *Great return on investment*

Teaming up with a global partner who has been developing the highest quality flooring seals and mortar systems since 1950s, our high performance floors provide a great return on investment.

Our flooring is extremely versatile, hardwearing and with the correct ongoing maintenance will perform for many years, ensuring that your facility continues to wow your customers and provides a great working environment for your employees.

## *Tailor-made floors*

We do not believe that one solution fits all and we will design the flooring system to suit your environment. We'll consider the type of production, your production cycles and chemicals exposure, traffic at your site, most common temperatures and slip resistance requirements.

Our Area Site Evaluation survey is crucial to establishing the condition of your existing floors, joints and cracks. Hygiene and health and safety requirements are important too and will need to be balanced with your house keeping capabilities.

Finally, your budget and your long-term vision for your plant will play a big role too.

## *We work 24/7*

We understand the impact on your business a refurbishment might have and we will work around your production plan to minimise any disruption.

Our crews are used to working at nights, over weekends or during public holidays to meet your scheduling requirements.

After the correct preparation, our flooring systems can be laid quickly on top of your existing concrete floors.
